CC The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease CC stability at low pH. The phytase enzyme can be used in foodstuffs to CC mumerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as chicken, ducks, doves, parrot, etc., CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC provides easy manufacture of the active ingredient loaded biocompatible CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Escherichia coli K12 appA phytase mutant DNA.
                                                                                                                                                                                                                                    Percent Similarity:

                                        The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to condified phytase enzyme which has improved thermal tolerance and protease CC stability at low pH. The phytase enzyme can be used in foodstuffs to comprove the feeding value of phytate rich ingredients, and in diet of CC numerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as guppy, zebrafish, molly, swordtail, CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC composition, higher yields and loading efficiency. The phytase CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Escherichia coli K12 appA phytase mutant DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    13-APR-1999;

The present sequence is a DNA sequence related to the production of the CC movel thermostable / protease resistant Escherichia coll phytase CC described in the specification. The present invention relates to a novel formulation, comprising at least one polypeptide having phytase activity. CC where the polypeptide is a modified sequence (AEE7542) derived from the Escherichia coll K-12 appA phytase (AEE7541). The modification of the CC enzyme, comprising a series of mutations, improves the thermal tolerance CC and protease stability of the protein. The specification also claims a CC pharmaceutical composition; a kit; an immobilized phytase; a fertilizer or soil additive, a liquid supplement for preventing muscle cramps; a CC hydrating agent; a tissue culture or cell culture media; and a plant food additive, all comprising the movel phytase, and a method of reducing CC pollution and increasing the movel phytase, and a method of reducing CC enzyme is a dietary supplement useful for treating, preventing or creversing osteoporosis or bone loss, and preventing muscle cramps. The CC enzyme is a dietary supplement useful for treating, preventing or creversing osteoporosis or bone loss, and preventing muscle cramps. The CC inquid supplement is useful for preventing muscle cramps. The mention or environmental sample by degrading environmental phytic acid, where the environment or environmental sample comprises a soil or a body of water. The immobilized phytase is useful in foodstuffs for improving the feeding value of phytate rich ingredients. NOTE: The CC present sequence is shown in the sequence listing but not discussed cc elsewhere in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; SEQ ID NO 5; 82pp;

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense curcleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of identifying a per proliferation, or that inhibits cellular proliferation or proliferation, or that inhibits cellular proliferation of a proliferation or that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening homologous nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurium, C. prokundown and the printed specification, but was obtained in the target or prokundown and cellular proliferation in cells other than S. aureus, S. typhimurium, C. prokundown and the printed specification, but was obtained in the target or prokundown and the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Wang

Novel recombinant phytase having modified phytase activity comprising modification of amino acid residues in mature Escherichia coli phytase designated EBC18B2, useful as feed additive.

Claim 19; Fig 21; 107pp; English.

The invention relates to recombinant modified AppA phytases having CC modified phytase activity. The AppA phytases are derived from a mature Escherichia coll AppA phytase designated EBC18B2 (see ADL16120), and CC comprise substitutions at least one of residues 26, 43, 46, 54, 73, 113, CC 126, 184, 228, 384 or 410, or at a residue located within 5 residues of CC those listed above. The invention also encompasses polymucleotides encoding a modified AppA phytase and which further encodes a secretion CC signal sequence operable in Bacillus sp.; expression constructs, vectors and host cells (preferably Bacillus subtiliss) comprising the CC polymucleotide sequences; and an method for the production of the modified AppA phytases. The invention also discloses a method of producing an CC enzyme having phytase activity; a method of producing a heterologous college of phypeptide having phytase activity in Bacillus subtilis; reducing the CC level of phosphorus in animal manure; a composition comprising a modified AppA phytase; and animal feed comprising cells, spores or plant parts, CC including seeds, capable of expressing a modified AppA phytase. The conditied AppA phytase are useful as an animal feed additive, particularly in feeds for non-ruminant livestock such as pigs and poultry which lack the digestive enzymes for extracting phosphorus from phytate (monoritations. For example, they can be used in the isolation and comprising comprises also have many other agricultural, industrial, medical and nutritional and comprises of phytases for example, they can be used in the isolation and recovery of rare metals to produce lower phosphate homologs of phytate

The enzyme has phytase activity and improved thermal C tolerance when compared with wild-type phytase. It has improved protease c stability at low pH. The recombinant phytase is useful for improving the nutritional value of phytase-containing foodstuffs and subsequently c improving the growth performance of an organism that consumes it, in c treating animal digestive systems, in feed treatment processes and for in c vitro purposes related to research, discovery and development. They are c also used for generating recombinant digestive system life forms, for c producing or manufacturing alcoholic and non-alcoholic drinks based on c the use of moulds, grains and/or plants, in biopulping and bio- bleaching where a reduction in the use of environmentally harmful chemicals that c are traditionally used in the pulp and paper industry is desired and in c supplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed. C The present sequence is a DNA encoding E. coli appA phytase wild type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New bacterial phytase for e.g. improving the nutritional value of phytate -containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, or in treating animal digestive systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1901 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 42; Fig 7; 170pp; English.

/product= "Phytase"

```
The invention relates to an isolated Escherichia coli polynucleotide cc encoding a phytase enzyme appearing as ADA19450 and having amino acids condification from W68E, Q84W, A95P, K97C, S168E, R180Y, N226C or Y277D. CC Also included the E. coli appA gene ADA19449 (or an oligonucleotide containing foodstuff by contacting nutritional value of a phytate-cc containing foodstuff by contacting the phytase-containing foodstuff and the phytase enzyme mutated phytase (where the phytase enzyme catalyzes the liberation of inorganic phosphate from the phytase enzyme catalyzes containing foodstuff), a method to produce an animal feed containing a microbial phytase (comprising culturing the plant cell, plant part or containing the plant cells, plants or plant into a composition for animals (comprising the plant seeds, plant cells, plants or plants in admixture with a phytate-containing codestuff), a method to treat a human or an animal able to benefit from the plant parts or plants in admixture with a phytate-containing comprising administering to the human or animal the plant seeds, plant cells, plant parts or plants of a transgenic plant which is modified to convertising the plant sor a transgenic plant which is modified to convertising a heterologous nucleic acid sequence encoding a phytase enzyme, a transgenic non-human organism whose genome comprising a heterologous nucleic acid sequence encoding a polypeptide having phytase activity. The phytate enzyme is useful for improving the converted method improves thermal tolerance and protease stability. It calso improves the feeding value of phytate rich ingredients. The present sequence represents the E. coli kil appA gene encoding wild-type phytase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  뭐
The invention discloses a new isolated or recombinant nucleic acid which encodes a polypeptide having a phytase activity. Also claimed is a nucleic acid probe, an amplification primer sequence pair, an expression cassette comprising the nucleic acid, a vector comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic acid, an antisense oligonucleotide, inhibiting the translation of a phytase message in a cell, a heterodimer comprising the polypeptide and
                                                                                                                                     New nucleic acid encoding a polypeptide having phytase activity, useful in improving the feeding value of phytate rich ingredients or as an aid in phytate digestion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Phytase; food supplement; enzyme delivery matrix; soybean meal; thermotolerance; thermostability; kernel; phytate; myo-inositol-hexaphosphate; inositol; inorganic phosphate; thermotolerant; feed value; digestion; gene; ds; appA.

                                                                                                                 CC a second domain, an array comprising immobilised polypeptide or nucleic cc acid, a hybridoma comprising an antibody that specifically binds to the CC polypeptide, a food supplement for an animal, an edible enzyme delivery CC matrix, an edible pellet comprising a granule edible carrier and the CC polypeptide, a feed composition, a soybean meal, isolating or identifying CC the polypeptide, making an anti-phytase antibody, producing a recombinant CC polypeptide, determining whether a compound binds to the polypeptide, ci dentifying a modulator, whole cell engineering of new or modified CC phenotypes by using real-time metabolic flux analysis, increasing CC the resistance of the phytase polypeptide to enzymatic inactivation in a CC digestive system and processing of corn and sorghum kernels. The phytase cativity comprises catalysis of phytate (myo-inositol-hexaphosphate) to inositol and inorganic phosphate and is thermotolerant. The nucleic acid is useful in improving the feeding value of phytate rich ingredients or CC as an aid in phytate digestion. The sequence presented is the DNA CC encoding the Escherichia coli appA phytase.

                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to commercially at low pH. The phytase enzyme can be used in foodstuffs to commercially at low pH. The phytase enzyme can be used in foodstuffs to commercially animals including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially commercially farmed fish such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtail, composition, higher yields and loading efficiency. The phytase composition, higher yields and loading efficiency. The phytase composition, higher yields and loading efficiency. The phytase composition is Escherichia coli K12 apph phytase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13-AUG-1997;
